

windows It is also possible that a host key has just been changed.

 [google.com/search](https://www.google.com/search)

This message indicates that the SSH key for the server you are connecting to has changed, which is common if the server was rebuilt or keys were rotated

How to Fix on Windows

- Navigate to `C:\Users\YourUsername\.ssh\` in Windows Explorer.
- Open the `known_hosts` file with Notepad.
- Delete the line that contains the IP address/hostname of the server you are trying to connect to.
- Save and close the file.
