

How to determine path of current script

tek-tips.com/threads/how-to-determine-path-of-current-script.1378749

[ddiamond](#)

I want one vbscript to be able to call another executable that is in the same directory.

I first tried:

```
WShell.Run ".\Tidy.exe", 2, True
```

Tidy.exe is in the same directory as my vbscript file.

This only worked if I launched my vbscript from the correct direcorey. I then tried:

```
WShell.Run WScript.Path & "\Tidy.exe", 2, True
```

Still didn't work. Neither did:

```
WShell.Run WScript.CurrentDirectory & "\Tidy.exe", 2, True
```

How can I determine the directory where my vbs file is located? In Visual basic 6.0 it would be app.path.

[mrmovie](#)

```
strCurrentFolder = UCase(Left(Wscript.ScriptFullName, Len(Wscript.ScriptFullName) -  
Len(Wscript.ScriptName) - 1))
```
